

RhinoBIM Technical Specifications

RhinoBIM is a series of BIM plug-ins for Rhino 5.0 from Virtual Build Technologies LLC. The first modules, Structure, Clash & Clear and Analysis are now available. This work-in-progress version is nearly feature complete and is expected to be released later this year. Everyone is invited to download it now.

Features include:

- Robust tools for adding and editing structural steel beams
- Extensive library of steel shapes including the international standards
- User definable steel shapes
- Assign materials, attributes, and process treatments to each element
- Extract data for downstream application including structural analysis, detailing, cost estimating, scheduling, staging, and fabrication
- Very fast clash and clearance analysis
- Full pre and post processing for analysis with Rhino modeling environment
- Very large model support using new Rhino 5.0 technology
